

Homework #2

Lesson 2A

Key Term Quiz:

- 3) A Web page is a document formatted with the **hypertext markup** language (HTML).
- 4) A(n) **web browser** is software you can use to navigate the World Wide Web
- 5) AND, OR, and NOT are examples of **Boolean operators**.
- 7) A(n) **metasearch** uses multiple search engines simultaneously to look up sites that match your keywords, phrase, or question.

Multiple choice:

- 4) Every Web page has a unique address, called a B) uniform resource locator (URL).
- 7) Because it uses HTTP, the Web supports B) hypertext documents.
- 8) The first point-and-click Web browser was named A) Mosaic.
- 10) Before you launch your browser and view a Web page, you may need to (either) B) connect to the Internet (**OR** make an appropriate sacrifice to the Gods of teh internetz).

Review Questions:

- 6) Three ways that you can specify a URL are: 1) typing the URL in the URL box, 2) clicking on a hyperlink that leads to a specific URL, or 3) save the URL in the bookmarks, then clicking on the bookmark whenever you want to go there.
- 8) A search engine allows you to retrieve information from the web by having the user input a word or string of words, scans the search engines vast depositories of tags for the inputted word(s) or

related words, and displays the information (or links to the information) for the user.

Lesson 2B

Key Term Quiz:

- 2) Outlook Express is an example of a(n) **e-mail client**.
- 4) Mail servers generally use the **post office** protocol (POP).
- 6) alt.food.chocolate could be an example of an Internet **newsgroup**.
- 8) If you want to get a specific file via the Internet, you might use the **file transfer** Protocol (FTP (ftw)).

Multiple choice:

- 3) The @ character is typically called the B) “at” symbol
- 5) A d) listserv system lets you participate in discussion groups by using your regular email software.
- 7) Many of the widely distributed Internet newsgroups are part of a system called C) usenet.
- 9) FTP sites are often called D) archives.

Review Questions:

- 4) A POP server is a mail server that uses the Post Office Protocol (apparently).
- 8) Public FTP archives are archives that allow anyone to download any file that has been uploaded into the archive. These sites believe in what we all learned in kindergarten: “sharing is caring.”
